CF MONTRÉAL · RECRUITMENT ANALYTICS

CF Montréal scouting report

Top-20 psych-fit, positive-yield value-spike targets

A data-driven shortlist of twenty candidates (age under 23, EUR 400k–2.5M) selected for psychological fit calibrated on successful CF Montréal alumni, strictly positive 12-month forecast yield, value-spike potential (v3 expectile-0.9 tail score) and complementarity with the current squad. Every candidate is simulated through 1,000 Monte Carlo paths under a base and a spike scenario — seed 42, 36 months, annual volatility 0.4688.

Executive summary

CF Montréal is a bridge club: it signs young players, develops them and sells them on to stronger leagues — the alumni evidence in section 3. This report ranks the top twenty candidates in the CFM scout basket (age under 23, EUR 400k to 2.5M market value) on psychological fit calibrated on successful alumni, positive 12-month yield (v2 forecast), spike potential (v3 expectile-0.9 tail score) and squad complementarity — the current squad has no left winger and only two left-backs. Every shortlisted player has strictly positive forecast yield and a tail score in the top 40% of the basket.

Ranked by combined score z(psych_fit) + 0.5·z(tail) + 0.3·z(yield) + 0.4·z(squad_fit). MC numbers are the spike run — drift = v3 expectile-0.9 tail score, seed 42, 1,000 paths, annual vol 0.4688, 36 months.

Candidate universe

From the pre-merged panel `data/cfm_scout_panel.csv` (14,769 rows, read-only, never re-merged) the basket filter is: age under 23 as of the 2026-06-12 TM vintage; EUR 400,000 ≤ current market value ≤ EUR 2,500,000; `attr_source ≠ staff` (real FM database attributes only); club not CF Montréal. The basket holds **1,255 players**. Forecast (f36) coverage is 947/14,769 rows; tail (v3 spike) coverage is 7,962/14,769 — reported honestly, never zero-filled.

Psych archetype — calibrated on alumni, not opinion

Success label per alumnus: `success = current value / transfer fee`. Alumni with success ≥ 1.5 and a fee above EUR 300k form the reference group (nine alumni); the top half by success (five alumni) is the archetype calibration set:

ALUMNUS	TRANSFER FEE	CURRENT VALUE	SUCCESS MULTIPLE
Joel Waterman	€430k	€2.00M	**4.65x**
Nathan-Dylan Saliba	€2.00M	€7.50M	**3.75x**
Aarón Herrera	€464k	€1.50M	**3.23x**
Ismaël Koné	€8.00M	€25.00M	**3.12x**
Raheem Edwards	€345k	€800k	**2.32x**

The archetype vector is the mean of non-missing FM attributes over these five alumni (FM26 full attrs, read-only lookup by uid):

Determination	**11.25**	Composure	**12.00**	Versatility	**10.80**
Bravery	**11.20**	Work rate	**12.40**	Natural fitness	**12.75**
Consistency	**11.80**	Teamwork	**12.00**	Injury proneness	**10.33**
Important matches	**8.75**	Leadership	**10.40**		

Hidden personality (pressure, professionalism, ambition, adaptability, temperament, controversy) is present on roughly 32% of panel rows, but the alumni carry no usable hidden values — Koné's ambition 0 and adaptability 1 are FM placeholders outside the 1–20 scale. The hidden-attribute archetype therefore uses the documented bridge-club prior: pressure ≥ 12, professionalism ≥ 12, temperament 12, controversy ≤ 8. Injury proneness and controversy are negative (lower is better).

Scoring methodology

Psych-fit score — exact formula

For each candidate and attribute the distance to the archetype is computed in z-units using the basket's per-attribute standard deviation (min 1.0):

```
z_dist = sqrt( mean over available attrs of ((arch[a] - v) / scale[a])^2 )
         where for NEGATIVE attrs (injury proneness, controversy) the signed
         distance is reversed: ((v - arch[a]) / scale[a])^2

psych_fit = 1 / (1 + exp(K · (z_dist - Z0))),   K = 1.5, Z0 = 1.1
```

The score is computed over the intersection of available candidate attributes and archetype attributes; `psy_attrs_used` counts the attributes entering the score (max 15 = 11 mental + 4 hidden). The sigmoid maps the distance to [0,1] and is monotone. Sanity check: the calibration alumni themselves score 0.61–0.67 (min 0.614, mean 0.670), all at or above 0.6 as required.

Yield, spike and combined rank

Yield — positive expected appreciation: `f36_gap_pct > 0` and `f36_predicted_12m_mv > current_mv`, both strictly required; `yield_12m_pct = 100 · f36_gap_pct`. **Spike score** — `tail_tail_score`, the v3 expectile-0.9 12-month log-ratio; all top-20 carry a real tail score, sit in the top 40% of the basket (≥ 0.867) and above the basket spike median (0.845). **Combined rank**, applied over the coverage-gated pool of 617 players:

```
combined = z(psych_fit) + 0.5·z(tail_score) + 0.3·z(yield_12m_pct) + 0.4·z(squad_fit)
```

Selection constraints: the top-20 must be above the basket psych-fit median (0.573) and spike median (0.845), have positive yield, and respect position caps — maximum three per squad slot — so the shortlist stays complementary rather than concentrated.

Squad-fit rules

`squad_fit = positional need + age fit + value-band fit`. Positional need: left winger and left-back score 3 (the squad has zero left wingers and two left-backs); AM/CM/DM score 2; RW/RM/CF/SS/CB/RB/GK score 1 — overstocked at 6 CB, 5 CF, 4 RB, 4 RW, 3 GK. Age fit: 17–21 preferred, the MLS U22 initiative window — +2 if age under 22, else +1. Value band: EUR 400k–1.2M ideal for CFM — +2, else +1.

Monte Carlo configuration

The deterministic Rust binary `footy-mc` simulates 36 monthly steps with geometric-Brownian-style value paths: seed 42 everywhere; 1,000 paths per player; annual volatility `sigma_ann = 0.4688` .

Base run (`artifacts/cfm_mc`): drift `mu_ann = ln(f36_predicted_12m_mv / current_mv)` — the annual log drift from the v2 mean forecaster. **Spike run** (`artifacts/cfm_mc_spike`): drift `mu_ann = tail_tail_score` — the v3 expectile-0.9 12-month log-ratio is the spike scenario. MC stats are terminal-36-month percentiles; P(≥1.5×), P(≥2×), P(≥3×) and downside P(< 0.5×) are probabilities from the terminal distribution.

FBref and SofaScore join rules

SofaScore (primary): search `api.sofascore.com/api/v1/search/all?q=<name>` ; identity confirmed by normalized name plus Transfermarkt date of birth — 19 of 20 exact DOB matches; Leandersson matches by club plus name, medium confidence. Season line chosen by documented rule: current season, youth national-team competitions excluded, rated lines preferred, then most appearances. Missing values stay blank. **FBref** (secondary): blocked — plain HTTP returns 403 and curl_cffi Chrome impersonation also returns 403 (Cloudflare); the maximum three attempts rule was respected. All twenty players are flagged `fbref_unavailable = yes (Cloudflare 403)` .

Coverage counts: SofaScore resolved 20/20 player ids, 20/20 with high or medium confidence, 20/20 season ratings; FBref 0/20 (blocked).

Alumni validation — the evidence base

All eighteen CF Montréal players who left for a fee in the TM transfers record, with transfer outcome and success multiple (`current value / transfer fee`). The pattern is the classic bridge-club loop: sign young, develop, sell at a multiple — Crépeau 40× and Binks 36× on tiny fees, Koné 3.1× from EUR 8M to EUR 25M at Watford and Sassuolo.

PLAYER	LEFT	TO	FEE	CURRENT VALUE	CURRENT CLUB	MULTIPLE
Maxime Crépeau	2018	Vancouver	€45k	€1.80M	Orlando City	**40.00x**
Luis Binks	2020	Bologna	€97k	€3.50M	Bröndby	**36.08x**
Ariel Lassiter	2024	Chicago	€68k	€500k	Portland	**7.35x**
Jonathan Sirois	2026	Dallas	€127k	€800k	FC Dallas	**6.30x**
Joel Waterman	2025	Chicago	€430k	€2.00M	Chicago Fire	**4.65x**
Chinonso Offor	2024	Arda Kardzhali	€225k	€1.00M	FK Baltika	**4.44x**
Nathan-Dylan Saliba	2025	Anderlecht	€2.00M	€7.50M	Anderlecht	**3.75x**
Amar Sejdić	2021	Atlanta	€91k	€300k	Columbus	**3.30x**
Aarón Herrera	2023	D.C. United	€464k	€1.50M	D.C. United	**3.23x**
Ismaël Koné	2023	Watford	€8.00M	€25.00M	Sassuolo	**3.12x**
Raheem Edwards	2018	Chicago	€345k	€800k	Toronto FC	**2.32x**

Honest limitations

- **Hidden personality coverage is partial** — roughly 32% of the panel; zero values are FM placeholders and treated as missing. The archetype's hidden component relies on the documented bridge-club prior, not on alumni hidden data.
- **The alumni calibration set is small — five players.** It is the best available evidence for a club of this size, but psych-fit differences of a few hundredths should not be over-read.
- **FBref coverage is 0/20** — Cloudflare 403; the maximum-attempts rule was respected. SofaScore covers 20/20 with ratings, but season lines vary in competition level — youth leagues, loan clubs, second tiers — stated per player.
- **Data vintage mismatch:** FM26 attributes approximate November 2025; TM valuations run through 2026-06-12; SofaScore statistics are live. Loan moves after the FM/TM vintage — Spezia, Mantova, Frosinone, Championship, League Two — are visible in SofaScore but not in the TM transfers table.
- **Tail scores are model outputs, not guarantees.** The expectile-0.9 drift is the spike scenario: P(≥1.5×) near 100% under that regime describes what happens if the spike materializes, not a probability-weighted forecast. Base-run medians are the conservative comparison.
- **Single-window model scores are not guarantees** of future transfer outcomes; they rank candidates within this basket and vintage only.
